7 April 65

Telecall to [redacted]

1. Three problem areas —
   a. Pen action
   b. Power source vs input air volume
   c. Interface.

Jim feels pen action can be solved up there & will send [redacted] down on Monday (12) to make fit. He will see down Wed or Thurs (14-15)

Will check out interface — however, the new wired boards should make a difference + alleviate interface.

All air input available is now on. Will make heat test as soon as possible. If low will adjust power source to be compatible. This will mean somewhat slower operation only.

2. Called [redacted] re test procedures. He is tied up on another program. Called [redacted] to get a reading on [redacted] assignment. Expect [redacted] to be assigned full time until acceptance is completed.

3. Jim would like acceptance test outline sent to them. Have it got one at present. [redacted] to look into Navy's program + see what it takes to convert to our use,
